

EYES AND EARS

36 Healthy ear. Cleaning routine

Ear cleaning is one of the basic needs of any companion animal.

Step 1

Pinna

Ear canal

Gently pull the ear pinna up with one hand to display the ear canal.

**Step 2**

With the other hand, put a tiny stream of a ear cleansing solution into the ear canal. Use a ear cleansing solution specifically created for pets and recommended by vets.

**Step 3**

Then, softly massage the ear canal so that the solution is properly distributed.

**Step 4**

After an hour, once the animal has shaken his head and the product has taken effect, remove the exudates accumulated in the ear and the entry of the external ear canal with a gauze or a wet wipe.

**Recommendations**

- Never introduce a cotton swab into the pet's ear. This promotes the wax to build up and could cause potential harm to the eardrum.
- Prevent water from entering the ears when bathing.
- Get the pet used to have frequent ear cleaning from an early age.
- Always use an ear cleaner after bathing the pet or swimming in the sea, a river or a swimming pool.
